

# Install and configure Grafana on Linux

Grafana is an open-source, multi-platform active monitoring and data visualization software with detailed analytics displayed on charts and graphs. It offers features such as reusable dynamic dashboards, exploring metrics with ad-hoc queries, creating alert rules for important metrics to continuously evaluate and send notifications in case of changes, and collaboration with team members through built-in sharing, among other features. In addition, it provides the capability for integration with data sources like InfluxDB, Elasticsearch, Graphite, and Prometheus.

## Tasks:

1. Install Grafana (server)
2. Access Grafana Dashboard
3. Configuration Data source Prometheus

# STEP 1 :

## Install Grafana (server) :

### Update the system packages :

```
sudo apt update
```

### Install required system packages :

```
sudo apt-get install -y gnupg2 curl software-properties-common
```

### Add Grafana GPG key :

```
sudo wget -q -O /usr/share/keyrings/grafana.key https://packages.grafana.com/gpg.key
```

### Install the Grafana repository :

```
echo "deb [signed-by=/usr/share/keyrings/grafana.key]  
https://packages.grafana.com/enterprise/deb stable main" | sudo tee -a  
/etc/apt/sources.list.d/grafana.list
```

### Update the system packages :

```
sudo apt-get update
```

### Install Grafana :

```
sudo apt-get install grafana-enterprise
```

### Start Grafana service :

```
sudo systemctl start grafana-server
```

### Enable Grafana service to start on system boot :

```
sudo systemctl enable grafana-server
```

### Check the service status :

```
sudo systemctl status grafana-server
```

## STEP 2 :

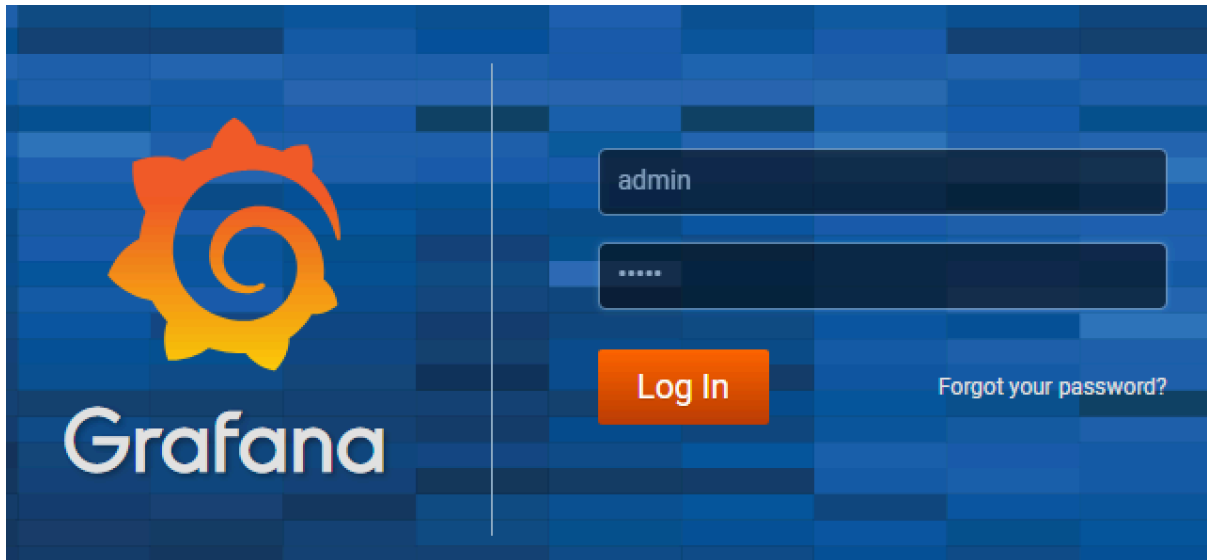

### Access Grafana Dashboard :

To access the Grafana Web Interface , go to your browser and visit :

**http://Server\_IP:3000**

For example:

http://x.x.x.x:3000

Default logins are:

Username: admin

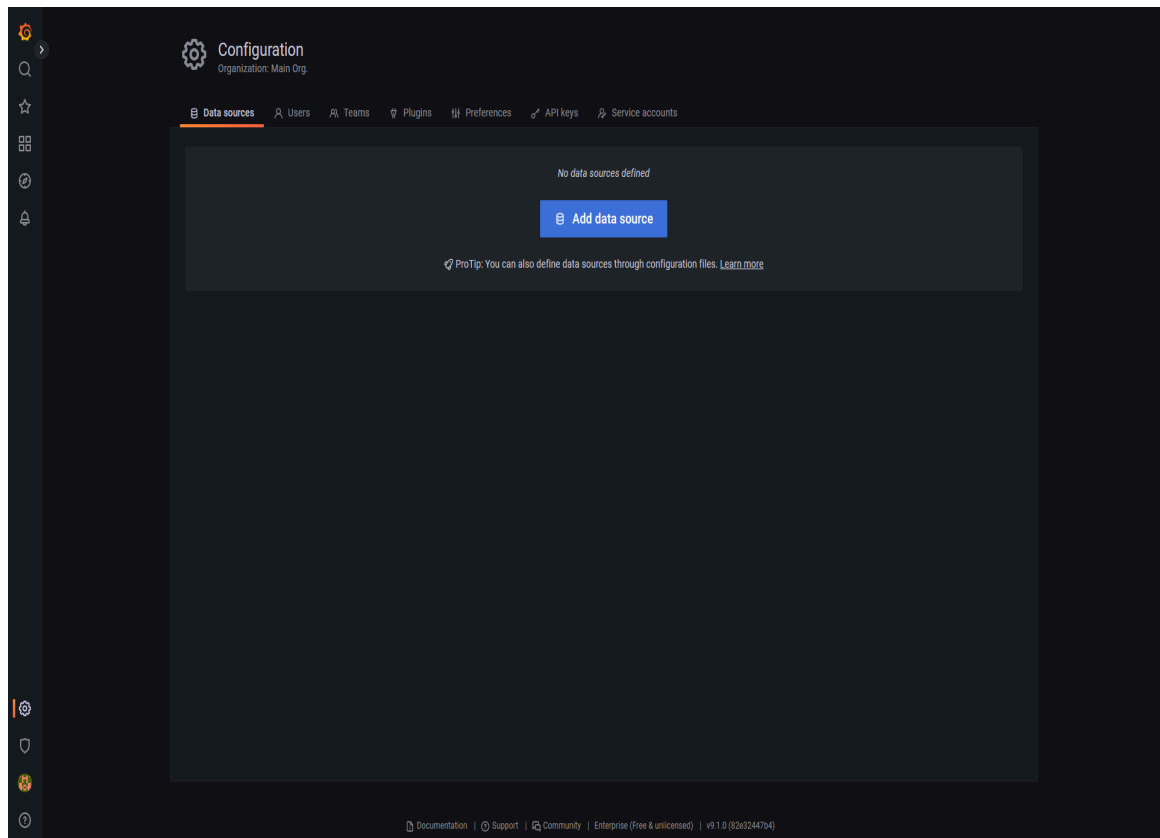

Password: admin

## STEP 3 :

### Configuration Data source Prometheus :

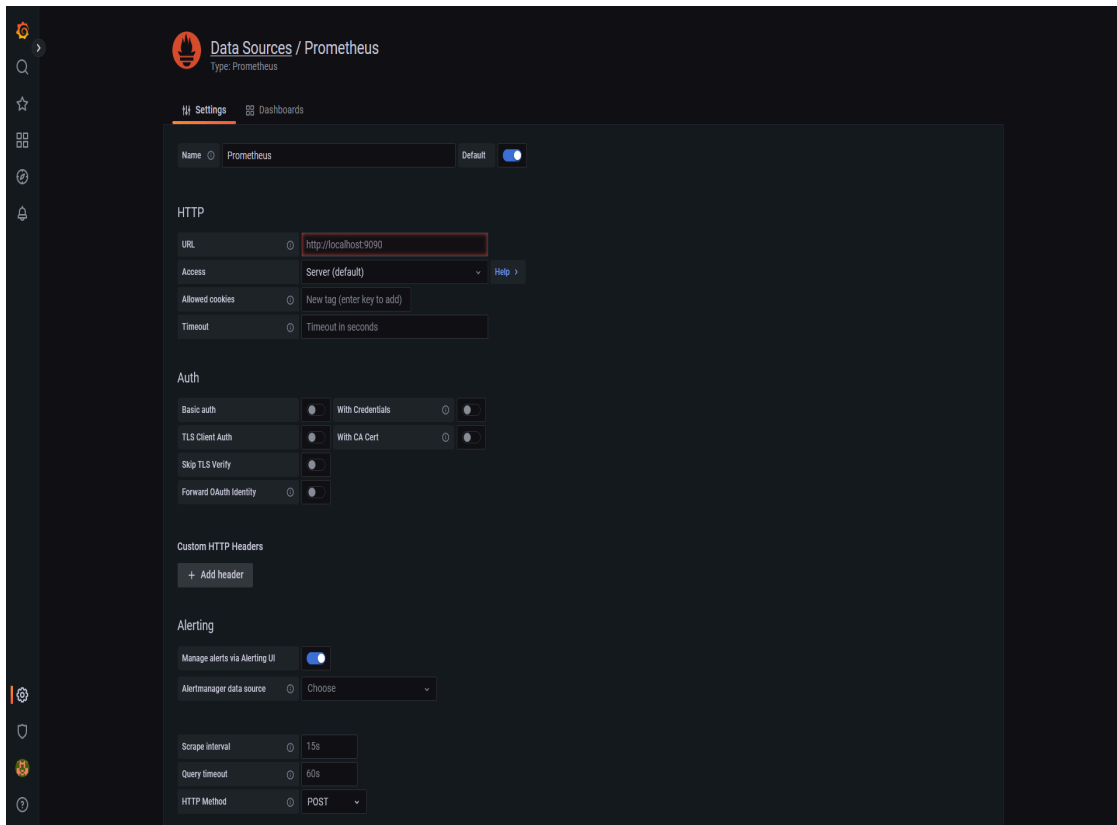

Add Prometheus Source To Grafana :

Click the “Configuration  Data sources ” option from the Grafana homepage

Click the " Add Data sources "

Select " prometheus "

URL : http://IP-prometheus-server:9090

URL : http://x.x.x.x:9090

Access : server (default)

Click the " save & test "

Data source is working

**Successful**

**END**
